Review Selected Undergraduate Genetic Materials

You are also required to review some undergraduate materials. We will do it in two different ways.

1. There is a genetic online book which we will use titled **Introduction to Molecular Genetics and Genomics**
2. I selected several videos which will introduce the very basic genetic terms so you can review it alongside the book.

Finally, there will be a pre-course evaluation test. The test grade will not count toward your final grade in this course, however, it will be available for you and me to help us to decide if you have the necessary background for this course. It is expected that you earn at least an 80% on that test before you begin Module 1. That is, you need to have at least 8 correct answers from the 10 questions.

Before taking the pre-course evaluation test which appears next, see the following which shows twelve undergraduate topics you need to review and know to be successful in this course: Review Topics (PDF).
